The Change Roadmap Platform

The Change Roadmap platform is a framework and tool for change management, all in one. This innovative solution provides a practical and flexible vehicle for managing the people side of change on organizational initiatives. It combines an adaptable, underpinning, people-centred framework with a guiding, flexible process to bring it to action, utilizing a web-based digital tool that captures and manages all the data. The real-time tool replaces inefficient templates, whilst creating key views to facilitate informed change management decisions and actions. The Change Roadmap is about unleashing your most efficient and effective change management. Saving time, money and achieving your change goals.

Why would I use it?

- **Simple.** The combination of framework and tool, bundled seamlessly into one solution, makes it easy.
- **Versatile.** A flexible, people-centred framework that allows application of elements from other models, frameworks, methodologies, theories and approaches. It doesn't impose a rigid approach.
- **Guiding.** Guides you through the key steps of change management, designed to align to standard project lifecycles and practices including iterative (e.g. Agile) approaches.
- **Efficient.** Provides a 'real-time' vehicle for data capture. Only need to enter data once. Link cloud-based documents to become the centralised hub for all your change initiative data.
- **Informative.** Data is presented in 'real-time', auto-generated views and reports. Visual 'heat indicators' assist decision making and actioning. Give key stakeholders access to view the change picture anytime, thereby reducing reporting needs.
- **Practical.** Designed for the real world.

Who should use The Change Roadmap?

Managers – Frontline managers right through to senior managers and change leaders. If you've been tasked with managing a business change, the Change Roadmap provides the essential guidance and tool for success.

New Practitioners and 'Accidental' Change Managers – The Change Roadmap will be your new best friend. The guiding framework, process and tool to manage it, all in one.

Experienced Change Management Practitioners – You can manage your complex change with its many stakeholders, efficiently and effectively through the platform.

Project Managers, Business Analysts, Business Improvement Practitioners, Business Representatives – No change manager on your initiative? The Change Roadmap will be invaluable to you. Navigate change management with ease and efficiency.

Got some more questions?

How much does it cost? – Great news! It's very affordable. Check out the subscription on our website.

Can I trial it? – Yes! You can have 30 days to trial it.

Where is The Change Roadmap based? – Sydney, Australia. Unless you're on Mars, we think you'll be able to use it.

Do I need to download anything onto my computer? – No, The Change Roadmap tool is a web-based Software as a Service. You just access the website and log in.

How do I know The Change Roadmap platform is secure? – The Change Roadmap follows world standards around cyber security. Using SSL to ensure all traffic is encrypted. All interactions within The Change Roadmap are over HTTPS. Users log in with two factor authentication. Bottom line is we keep things secure so you can get on with managing change. For further information refer our Technical Information.

Will I need help to use it? – For best outcomes and full change management capability, we do recommend utilizing our comprehensive learning options (see our website). The tool itself has field level help and a full user guide. For experienced change practitioners, we recommend our half-day instructor led session specifically on using the platform.

What does the Change Roadmap not do?

It isn't a document management or storage system (most organizations already have one). It creates documents instantly, in real time, when needed. It allows you to link external documents becoming the central window to all your change information.

It doesn't replace your project or portfolio management tool. It's change management but aligns perfectly with project management practices to make it all work.

It does not have integrations with other applications. It's about change management and we keep it secure and simple.
